

SUPPLEMENT PELLETT

AIM

CONVERTER Sheep 50 PT

Method

To Be Mixed With Grain

Dose Rate

Sheep: 50 Kgs Per Tonne Finished Feed

Unit Size

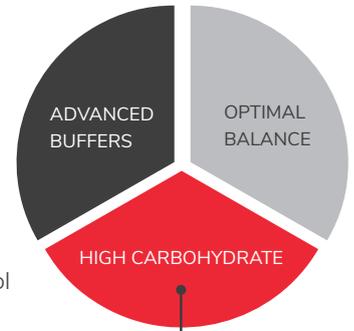

25 Kg or 1,000 Kg Bulk Bag

GRAIN FEEDING MANAGEMENT

For Sheep & Lambs. Grain or grain based rations for sheep feeding often lack the sophisticated nutrient profile required to optimise animal growth, health and feed efficiency, leading to significantly reduced returns from either feedlot or supplementary feeding programs. Designed by Australian experts for Australian conditions, Converter Sheep 50 is a concentrated supplement pellet containing an advanced blend of Macro & Micro minerals, Vitamins, Buffers and Rumen Modifiers engineered for ready inclusion into high performance feedlot or supplementary diets.

CONVERTER Sheep 50 PT

A concentrated, carefully balanced Pellet formulation for ready inclusion in high and low grain content sheep feedlot diets and supplementary feeding rations. Also contains Lasalocid Sodium for control of Coccidiosis.

FAQ'S

How much Converter Sheep 50 Pellet do I use? The Pellet is designed to be included in a well-formulated feedlot diet at the rate of 5%, or 50 kgs per tonne of finished feed. To optimise the productive benefit, we suggest you speak to an Accredited A.I.M. Advisor to obtain advice in relation to formulating the complete ration.

How do I mix the Pellet with grain? The most effective way to mix Converter with grain is via a vertical paddle or ribbon mixer. This will ensure even distribution of the Pellet through the mix. If you don't have a mixer, adding Converter Sheep 50 at a proportional rate to grain as it is being augered can often be quite successful, however care and diligence is required in order to ensure even distribution.

Does Converter Sheep 50 contain products which limit/prevent grain poisoning? Yes. Converter Sheep 50 Pellet contains Buffers - compounds that help to control or prevent Acidosis. However due care during Feedlot Induction and Feeding is a critical part of managing the risk associated with Acidosis.

When do I use Converter Sheep 50 Pellet? The Pellet has several applications. The first of these is in Sheep Feedlot diets. The Pellet is also valuable as a component of supplementary trail or bin feeding.

Can I add other additives to the grain ration whilst using Converter Sheep 50 Pellet? Yes, but this is usually completely unnecessary and may often reduce the effectiveness of the Pellet by upsetting the nutrient balance it contains. We strongly suggest that you discuss your options with an Accredited A.I.M. Advisor before proceeding with including additional additives to the grain diet.

Can I include Converter Sheep 50 Pellet in the grain I use to feed lambs before they enter the feedlot? Yes. Pre-adapting lambs to both the grain and the mineral and buffers contained in Converter Sheep 50 is a great idea. This should be included at the full rate of 5% or 50 Kilograms per tonne of finished feed.

Composition Nutrient Sources

Vegetable Proteins and/or Non Protein Nitrogen, Simple Sugars and/or Starches, Vitamins and/or Vitamin Precursors, Inorganic Minerals and/or Mineral Chelates, Salt, Vegetable Oil and/or Molasses.

Nutrient Profile

Macro Minerals	Calcium, Magnesium, Phosphorous, Potassium, Sodium, Sulphur.
Trace Elements	Cobalt, Copper, Iodine, Iron, Manganese, Selenium, Zinc.
Vitamins	Vitamins A, D, E and B Group,
Other	Advanced Buffer Complex, Lasalocid Sodium.

Calculated Analysis (M.F.)

Crude Protein	%	12.50
Crude Fat	%	3.16
Carbohydrate	%	3.50
Calcium	%	8.60
Phosphorous	%	0.80
Sodium	%	0.80
Lasalocid Sodium	mg/kg	500
