

POWDER ADDITIVE

AIM

PROGENX

DairyMix 180 (D) AD

Method

To Be Mixed With Grain

Dose Rate

Dairy Cows: 180 g/h/day

Unit Size

25 Kg or 1,000 Kg Bulk Bag

LACTATION MANAGEMENT

For Dairy Cows (Only). Lactating Dairy Cows export large quantities of critical nutrients on a daily basis. Failure to replace those nutrients through a balanced ration can result in significantly reduced milk and solids production and/or fertility. ProgenX DairyMix 180 is a concentrated powder additive and rich source of those Macro Minerals, Vitamins, Buffers, Rumen Modifiers and other critical nutrients Cows require in order to perform at the highest levels of production and fertility.

PROGENX DairyMix 180 (D) AD

FAQ'S

How do I mix ProgenX DairyMix 180 with grain? The most effective way to mix the powder with grain is via a vertical, paddle or ribbon mixer. This will ensure even distribution of the Powder through the mix. If you don't have a mixer, adding Dairy Mix 180 at a proportional rate to grain as it is being augered can often be quite successful, however care and diligence is required in order to ensure even distribution.

Is there anything I can use to improve the distribution of ProgenX Dairy Mix 180 in my grain feed? Yes. Adding a small amount of vegetable oil (5 to 10 litres per tonne) or molasses (10 litres per tonne) will help keep the powdered premix in suspension with the grain.

Does ProgenX DairyMix 180 contain products which limit or prevent grain poisoning? Yes. The formulation does contain Buffers - compounds which help to control or prevent Acidosis. However due care during grain feeding is always a critical part of managing the risk associated with Acidosis.

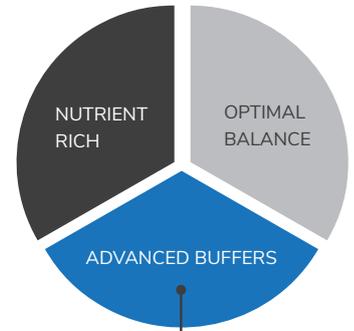

How much ProgenX DairyMix 180 do I use? The Powder is designed to be included in a well-formulated dairy grain diet at the rate of 180 grams per cow per day. To optimise the productive benefit, speak to an Accredited A.I.M. Advisor to obtain advice in relation to formulating the complete ration.

Can I add other additives to the grain ration whilst using ProgenX Dairy Mix 180? Yes, but this is usually completely unnecessary and may often reduce the effectiveness of the Powder by upsetting the nutrient balance it contains. We strongly suggest you discuss your options with an Accredited A.I.M. Advisor before proceeding in this way.

Can I mix ProgenX DairyMix 180 in the grain that I use to feed my Springers? Yes, but this is not recommended. It is not good practice to feed lactating cow premixes to springing cattle at risk of inducing clinical or sub-clinical milk fever. A.I.M.'s Soluble Acid Salts is a much more appropriate formulation for Springing cattle.

Should I include ProgenX DairyMix 180 in the grain I use to feed my calves? Yes, you can. However, a Calf Micro Macro formulation is available from AIM and this may be more suitable for that application.

For lactating Dairy Cows on supplemental or fully mixed grain diets. To be provided at the rate of 180 grams per head per day, thoroughly mixed in feed. Contains Monensin Sodium and an advanced Buffer Complex.

Composition Nutrient Sources

Vitamins and/or Vitamin Precursors, Inorganic Minerals and/or Mineral Chelates, Buffers, Salt, Vegetable Oil and/or Molasses, Cereal Grains, Starches and/or Simple Sugars.

Nutrient Profile

Macro Minerals	Calcium, Magnesium, Phosphorous, Sodium, Sulphur.
Trace Elements	Cobalt, Copper, Iodine, Manganese, Selenium, Zinc.
Vitamins	Vitamins A, D, E and B Group.
Other	Advanced Buffer Complex, Monensin Sodium.

Calculated Analysis (M.F.)

Crude Protein	%	0.14
Crude Fat	%	0.98
Carbohydrate	%	0.25
Calcium	%	16.40
Magnesium	%	9.05
Phosphorous	%	0.39
Sodium	%	8.01
Monensin Sodium	mg/kg	1258
