

POWDER LOOSE LICK

AIM

PROGENX LeadUp (CS) LK

Method

Deliver Ad Lib, Via Containers

Dose Rate

Cows: 90 g/h/d | Ewes: 25 g/h/d

Unit Size

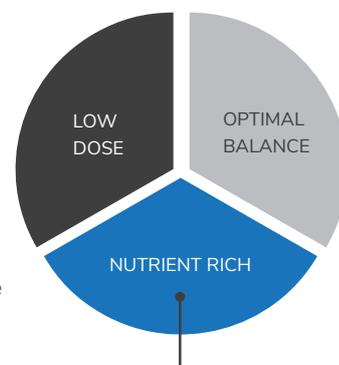

25 Kg or 1,000 Kg Bulk Bag

CALVING & LAMBING MANAGEMENT

For Cows & Ewes. Beef, Sheep & Dairy animals undergo significant metabolic changes in the period leading up to and during calving or lambing. Those changes increase demand for a range of key nutrients that are essential to giving birth efficiently and producing high levels of quality Colostrum and Milk. Designed by Australian experts for Australian conditions, ProgenX LeadUp Lick is a concentrated, low dose powder lick for use with Cows and Ewes in the last 14 to 21 days prior to Calving or Lambing. Also contains advanced Moisture Resistance Technologies.

PROGENX LeadUp (CS) LK

A convenient, low dose powder formulation containing a specific blend of minerals, vitamins and carbohydrates critical to Cows & Ewes in the last stages of gestation. Also contains Moisture Resistance Technologies.

FAQ'S

Does ProgenX LeadUp Lick come in Block form? No. The reason for this is simple: Loose Lick supplements can provide much better value for money than Blocks because powders have little or no requirement for the use of binders or fillers.

How do I manage even intake across the mob? There are a number of ways to optimise even intake. The product should be introduced gradually, by only putting out sufficient product to supply three days dosage at a time. Ensuring the right ratio of containers to animals and the use of mesh to restrict intake are also important techniques. Contact an Accredited A.I.M. Advisor to discuss.

What sort of container should I use, and how many? Dedicated troughs are great, but for a low cost solution we suggest old tyres (halved longitudinally), top and/or bottom third of a 205 lt drum, or half a plastic 20 lt drum. Place containers near water, at the rate of 1 container per 15 Cattle, or 1 container per 50 Sheep.

Does it matter if ProgenX LeadUp Lick gets wet? The moisture resistant technologies used in ProgenX LeadUp Lick are highly effective at keeping the product dry in wet conditions by forming a thin "weatherproof" crust. However it is critical to drill a few small holes in the bottom of containers to allow excess water to drain away.

Will it matter if I'm already feeding other supplements? It may. We assume that if you're using ProgenX LeadUp Lick, you've already spoken to an Accredited A.I.M. Advisor to ascertain its suitability for your application.

Is there a quick way to determine how much to put out? That's easy! For Cattle, allow a maximum of 90 grams / h / day, or 9 kilograms per 100 cattle per day. For Sheep, allow a maximum of 25 grams / h / day, or 2.5 kilograms per 100 sheep per day.

Is there any time during the year when I SHOULDNT feed ProgenX LeadUp Lick? Lead Up Pro Lick is only designed to be used for the last 14 to 21 days prior to Calving or Lambing.

Composition Nutrient Sources

Inorganic Minerals and/or Mineral Chelates, Vitamins and/or Vitamin Precursors, Vegetable Oil and/or Molasses, Starches and/or Di- and/or Polysaccharides.

Nutrient Profile

Macro Minerals	Calcium, Magnesium, Phosphorous, Sodium.
Trace Elements	Selenium, Zinc.
Vitamins	Vitamins A, D, E and B Group, plus advanced forms of Vitamins A, D, E, Biotin, B5, B6, and Folic Acid.
Other	Moisture Resistance Technologies.

Calculated Analysis (M.F.)

Crude Protein	%	2.30
Crude Fat	%	1.07
Carbohydrate	%	39.55
Calcium	%	6.73
Magnesium	%	20.00
Phosphorous	%	0.24
Sodium	%	2.96
